

HTML Comprehensive Notes

Level 4: HTML Tables

Table Structure

Tables are created using `<table>`, `<tr>` for rows, `<td>` for cells, and `<th>` for headers.

html

Copy code

```
<table>

  <tr>

    <th>Header 1</th>
    <th>Header 2</th>

  </tr>

  <tr>

    <td>Data 1</td>
    <td>Data 2</td>

  </tr>

</table>
```

Merging Cells

Use the `rowspan` and `colspan` attributes to merge cells vertically or horizontally:

html

Copy code

```
<td rowspan="2">Merged Cell</td>

<td colspan="2">Merged Header</td>
```
