HTML Comprehensive Notes

Level 2: Intermediate HTML Elements

The <title> Element

Defines the title of the document shown in the browser tab.

Email Links

To create a link that opens the user's email client, use:

html

Copy code

```
<a href="mailto:someone@example.com">Email Me</a>
```

Metadata

The <meta> tag provides metadata such as keywords and descriptions crucial for SEO:

html

Copy code

```
<meta name="description" content="Description of the page">
```

Forms

Forms collect user input. The <form> element wraps all input elements:

html

Copy code

```
<form action="submit.php" method="POST">
   <input type="text" name="username" required>
   <input type="submit" value="Submit">
</form>
```

<select> for Dropdowns

To create dropdown lists:

html

Copy code

```
<select>
   <option value="1">Option 1</option>
```

```
    <option value="2">Option 2</option>

</select>
```
